# Supplier Relationship Management (SRM) 7.2

SRM Workload Distribution Expanded to Include Purchase Orders, RFxs and Contracts

The SCEIS Team is pleased to announce that Workload Redistribution has been expanded to include Purchase Orders, RFxs and Contracts.

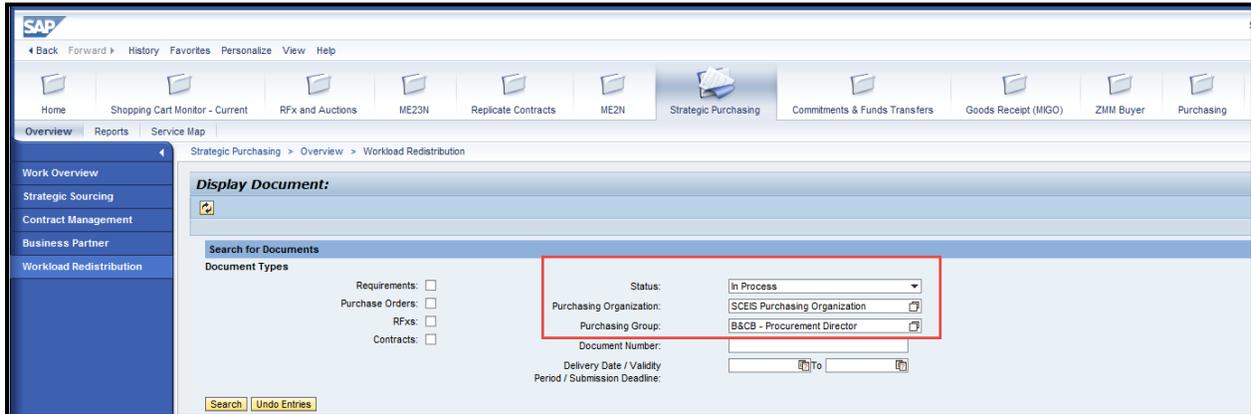

A status of **"In-Process"** for Purchase Orders, RFxs and Contracts will return a search result of any document that has a status of **"Saved"** or **"Awaiting Approval."**

To redistribute Purchase Orders, RFxs and Contracts with a status of **"Ordered," "Published,"** or **"Released"** select the status of **"All."**

As a best practice, please make sure that you have selected a Purchasing Organization as well as a Purchasing Group before searching for any document that needs to be redistributed.

SCEIS has corrected the issue where the status of **"In-Process"** for **"Requirements"** (Shopping Carts) was returning **"In-Process"** and **"Completed"** documents. When selecting the status of **"In-Process"** for Requirements the system will only return search results of any Shopping Cart that is currently **"Approved"** and in **"Perform Sourcing"** to be sourced.
