Error or Issue	Resolution
Clicked on "SAVE" rather than "post goods issue"	**Problem:** When the user clicks on "SAVE" rather than "Post Goods Issue," a delivery document is not created and an invoice cannot be generated. **Resolution**: If the user has clicked on "SAVE" rather than "Post Goods Issue," the user must then go to transaction VL06O "Outbound Delivery Monitor." The user should be able to locate the document saved in either or both selection types, "For Picking" and "For Goods Issue." There the user will complete the transaction(s). Once posted, a delivery document is generated and an invoice can be created.
